Smart Key System (Option)

This is an epochmaking system which, if you are carrying the smart key, enables a series of operations, from unlocking the door, starting the engine, driving, stopping, then locking the door all without actually using the key.

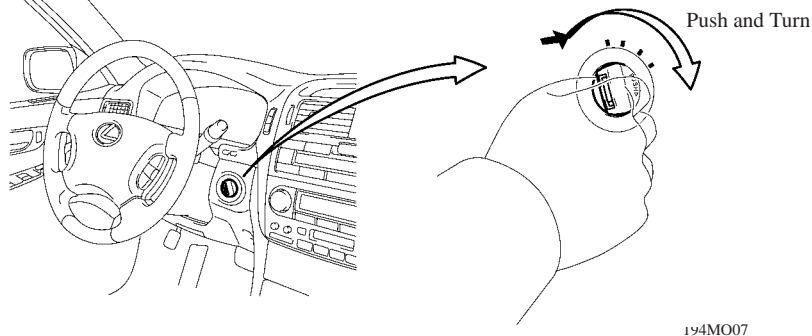

When you are carrying the smart key:

1. The door will unlock if you touch the outside door handle.

2. When entering the vehicle, the starter motor will operate and start the engine, preparing the vehicle to be driven, even without inserting the key into the ignition switch.

3. After the passengers exit the vehicle and close all the doors, the doors will lock if the lock switch on the outside door handle is pressed.
4. Pressing the smart trunk open switch on the luggage door opens the luggage door.
